LUONG TUAN GIAI

Backend / AI Engineer Intern

SUMMARY

Software Engineering student with a strong interest in backend development and data-driven systems. Skilled in building RESTful APIs using FastAPI, Spring Boot, and C#, with hands-on experience integrating NLP-based semantic similarity models.
Possess a solid foundation in data structures, algorithms, object-oriented programming, and relational database design. Seeking a Backend or AI Engineer Internship to contribute to the development of scalable backend systems and AI-driven applications, while continuously improving code quality and development efficiency. Eager to work in a professional, fast-paced environment to gain hands-on experience and prepare for future career opportunities.

EDUCATION

Software Engineering

Saigon University - SGU

Sep 2022 - 2027 (Expected)

Relevant Courses

- Data Structures & Algorithms, Software Engineering
- Fundamental of Artificial Intelligence
- Object-Oriented Programming (OOP)
- Computer Networks
- Information Systems Analysis and Design
- Project Management (PMBOK® Guide – 6th Edition)

CONTACT

- **Age:** 22 years old
- **Phone:** (+84) 936186930
- **Address:** District 5, HCMC
- **Email:** tuangiai52@gmail.com
- **Github:** github.com/junjiax
- **Linkedin:** linkedin.com/in/luong-tuan-giai-b6b58634b/

LANGUAGES

- English ★★★★☆
- Chinese ★★★★☆

TECHNICAL EXPERTISE

- Java - C# - Python - PHP ★★★★☆
- HTML - CSS - JavaScript - React - Tailwind ★★★☆☆
- FastAPI - Spring Boot - ASP.NET MVC - Laravel ★★★☆☆
- MySQL, PostgreSQL, SQL Server ★★★★☆
- AI Intergration System ★★★☆☆
- Docker, Linux (Ubuntu, CentOS), Git, GitHub, Swagger, Postman ★★★★☆
- RESTful APIs, WebSocket, MVC Architecture, Layered Architecture ★★★★☆
- UML (Class Diagram, Sequence Diagram, Use Case Diagram), ERD, Database Schema Design, DFD, BRD, SRS ★★★★☆
- Unit Testing, API Testing, Test Case Design ★★★★☆

SKILLS

- Strong presentation skills with the ability to effectively communicate ideas and technical knowledge to diverse audiences.
- Experienced in team collaboration and leadership, code reviews, including facilitating meetings to discuss progress, address issues, and align on technical decisions.
- Fast learner with adaptability to new technologies, system/business process
- Problem-solving mindset with ability to propose alternative solutions
- Design and create technical documentation (SRS, BRD, Test case and more)
- Scheduling tasks using Google Sheet and estimating task complexity to allocate work effectively, boost team productivity.
- Skilled in presenting ideas using PowerPoint and Canva
- Experience working in team-based development environments

UNIVERSITY PROJECTS

Automated Recruitment Screening System (AI Integration Project)

Team member I Jan 2026 - Present

Python - FastAPI - PostgreSQL - Docker - OAuth2 - Sentence Transformers - Swagger

https://github.com/nvhao100604/fast_api/tree/ltgiai

- Developed RESTful APIs using FastAPI to filter, rank, and match CVs with job descriptions.
- Integrated the Sentence Transformers model (all-MiniLM-L6-v2) to generate semantic embeddings and store them in the database for retrieval and similarity computation.
- Implemented a cosine similarity algorithm to rank candidate–job relevance.
- Stored embeddings in PostgreSQL for efficient similarity comparison.
- Applied data validation using Pydantic.
- Currently learning and planning to containerize the application using Docker.
- Prepared project documentation and technical reports.
- Scheduled tasks and supported team coordination to ensure timely project completion.

Tour Booking Web Application

Team member I September 2025 – December 2026

Spring Boot · MySQL · Docker · React · n8n · Postman

https://github.com/junjiax/Project_J2EE.git

- Designed and implemented the tour reservation workflow using Spring Boot, including querying, full CRUD operations, and standardized request/response structures following RESTful principles.
- Developed a responsive user interface with React, integrating seamlessly with backend services via RESTful APIs for real-time data interaction.
- Implemented pricing calculation logic for invoices, handling multiple business rules (e.g., discounts, quantities), and integrated the VNPay payment gateway with idempotent request handling and secure callback validation
- Conducted API testing using tools like Postman, standardized response formats for consistency
- Coordinated frontend–backend integration, developed UI use React, resolved data contract issues, and maintained clear API documentation.

UNIVERSITY PROJECTS

Store Management System

Leader I September 2025 – December 2026

ASP.NET MVC · .NET Entity Framework · MySQL · Docker · Blazor WebAssembly · Postman

https://github.com/junjiax/storage-management-backend.git

- Orchestrated team members to execute assigned tasks effectively, facilitated regular meetings to track progress and resolve issues, and contributed to writing project reports and documentation.
- Researched and practiced using .NET Entity Framework to design and implement entities, as well as define relationships using a code-first approach. *https://github.com/junjiax/tutorial-dotnet-ef.git*
- Developed RESTful APIs and performed API testing using Postman; standardized API endpoints and validated core business functionalities such as invoice calculation and CRUD operations for cart items.
- Reviewed and analyzed code to improve quality, readability, and maintainability.
- Studied and practiced modern .NET technologies, based on “C# 13 and .NET 9 - Modern Cross-Platform Development Fundamentals” by Mark J. Price.

Software Project Management

Leader | September 2025 – December 2026

Microsoft project · PMBokv6

- Developed project management documentation, including planning artifacts and a detailed Gantt chart to track progress and milestones.
- Studied and applied Software Development Life Cycle (SDLC) concepts and software management principles in practice.
- Prepared project scheduling materials, defining timelines, deliverables, and task dependencies.
- Orchestrated and coordinated a team of 4 members, ensuring effective communication, task allocation, and timely delivery of project goals.

Instagram Clone

Team member | 2024

Spring Boot · React · MySQL · Axios · Postman

https://github.com/junjiax/instagram-clone-fe-be-refactor.git

- Developed backend services using Spring Boot and Spring Data JPA to support user follow/unfollow functionality.
- Implemented WebSocket-based real-time features for follow/unfollow actions and notifications, enhancing user engagement and responsiveness.
- Designed and documented RESTful APIs consumed by the React frontend, and optimized database queries to improve performance.
- Built the user follow dashboard on the frontend using React, integrating data from backend services via Axios.
- Collaborated on frontend components and implemented integration tests to ensure end-to-end system stability.

UNIVERSITY PROJECTS

Spotify Clone Application Laravel

Leader | 2024

Laravel · React · MySQL

https://github.com/junjiax/music_app.git

- Envole in backend and Leader of a team size 8 divide into 2 group: front-end and backend
- Validate Usecase, DFD, Sequential diagram repaired by team member
- Learning, Developed backend use laravel and rest API
- Designed and documented REST APIs consumed by the React frontend; optimized queries for performance.
- Collaborated on frontend components and created integration tests to ensure end-to-end stability.
- Prepare presentation
