Nguyễn Vũ Hào

Intern Front-end Developer

Dob: Jun 10, 2004
Gender: Male
Phone: 0799697981
Email: biedu.upes@gmail.com
Website: https://my-website-nvh.vercel.app
Address: Binh Dong Ward (Former District 8), Ho Chi Minh City
GitHub: https://github.com/nvhao100604

OBJECTIVE

Final-year Information Systems student at SGU, specializing in full-stack development with **React** / **Next.js**, **FastAPI**, and **Python**. I have a proven ability to bridge AI-driven logic—specifically semantic resume evaluation—with user-centric design to deliver sophisticated digital solutions. With a solid foundation in system analysis and scalable architecture, I am driven to excel as a Full-stack Developer and evolve into a Technical Lead within the next 5 years.

EDUCATION

Oct 2022 - Present

Sai Gon University

Major: Information System (IS)

TECHNICAL PROJECTS

Jul 2025 - Present

Food Ordering Platform (Full-stack Development) - ***In progress***

Developed a fullstack food ordering system using React, FastAPI, and Supabase, implementing RESTful APIs and CRUD operations for order management.

GitHub: https://github.com/nvhao100604/order-front-end
Live Demo: https://order-vh.vercel.app
Team size: 1 – Developed independently

Technologies:

- Frontend: Next.js, TypeScript
- Backend: FastAPI
- Database: Supabase (PostgreSQL)
- Deployment: Vercel

Main features:

- Built a responsive food ordering interface for Desktop and Mobile
- Implemented JSON Web Token authentication and authorization
- Implemented menu page with cart management and order submission
- Provided a staff dashboard to manage orders and create orders for customers
- Managed global state and data fetching with Redux Toolkit
- Developed RESTful API endpoints with CRUD operations

Jan 2026 - Present

FastAPI Automated Recruitment Screening System (Backend Development) - ***In progress***

Developed an AI-powered recruitment screening system using FastAPI and the all-MiniLM-L6-v2 Transformer model to evaluate candidate-job fit through semantic similarity analysis

GitHub: https://github.com/nvhao100604/fast_api.git
Team size: 4
Technologies:

- Backend: Python, FastAPI
- AI/ML: Sentence-Transformers
- Database: PostgreSQL, pgvector
- DevOps & Tools: Docker, Docker Compose, Alembic

Main features:

- Implemented CV-JD correlation using AI models.
- Integrated high-dimensional search via pgvector integration.
- Managed database schema management with Alembic.
- Containerized environment with Docker Compose.
- Developed RESTful APIs for CV processing and CRUD endpoints

ACTIVITIES

2023 - Present

IT Faculty Youth Union – Saigon University

Member of the Executive Committee

- Organized hackathons, workshops, and faculty events
- Assisted in coordination and participant support

SKILLS

Front-end	HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js, Tailwind CSS
Back-end	Python (FastAPI), PHP, Java
Database	PostgreSQL / MySQL
Tools	Git, GitHub, Docker, Supabase
English	Able to read technical documentation and communicate in English at a basic level

INTERESTS

Building side projects from personal ideas, exploring backend system design, and strategy-based games.
